## INTRODUCTION

The observations now finally published in this volume were made by Professor Peters, during the decade beginning in 1860, with the 13-inch Spencer refractor of the Litchfield Observatory of Hamilton College, at Clinton,<sup>1</sup> N. Y. They were prepared in tabular form by their author for publication, and his 412 pages of manuscript tables, with some minor omissions, served the printer as copy. It is supposed that Dr. Peters also wrote an introduction describing the methods of observation and reduction, but unfortunately this seems to have been hopelessly lost. The fourteen original notebooks entitled, "Observationes astronomicae originales Maculae Solis," are preserved in good condition. These contain for each date a pencil sketch of the appearance of the spots on the sun's disk (of diameter about 11 cm), presumably copied from the larger sketch made on the projection screen. They also record the readings from the chronograph sheets and the declination scale, together with the clock error.

There were also preserved the 312 sheets of reductions, representing the logarithmic work involved in deriving the heliographic latitude and longitude. These also show what reduction quantities, calculated from the adopted elements of the sun's rotation, were used each day, but they do not state whence the elements were derived. The author doubtless computed tables for his own use in the work, but they have not been found. Investigation has shown that he employed for the longitude of the node and the inclination the values derived by Carrington from his long series of observations, and recommended by him for future adoption, viz.,  $N=73^{\circ} 40'$  for 1850,  $I=7^{\circ} 15'$ . Dr. Peters employed a different period and a different epoch from those of Carrington, and reckoned his longitudes in the opposite direction.

In order to give, in the author's own words, a general description of the procedure followed in the observations, the editor has translated the following article by Dr. Peters, which appeared in Band 64, pp. 209-213 (1865), of *Astronomische Nachrichten*.

"In the observations which have been made here since May 1860 on the phenomena of the solar surface, the principle was adopted of measuring as far as possible everything of a measurable character that appeared on the solar disk. Therefore in the first instance the co-ordinates were determined of all the visible spots on each date, and these determinations were extended to all the isolated dots and the principal members of groups; also, indeed, to many faculae of definite form. For spots of considerable extent the dimensions of the umbra and penumbra were micro-metrically determined, generally in the direction of declination and right ascension. An accurate sketch was always prepared before the observations and was a necessary auxiliary, partly for convenience as a reference map during the observations and partly for the comparative study both of the changes in the forms of the spots and the arrangements of the components of the groups, as well as of the intensity of the outbursts and their relative positions and sequence. In the winter months observations were made on every favorable day; but in summer, when fair weather can be more safely counted on, every second day was made the rule, inasmuch as this was in general sufficient for keeping the spots under watch in their different stages; and, moreover, the use of the refractor for the observations at night always required a somewhat disturbing exchange of the attachments at the eyepiece.

"For the observation of the sun the image was projected on a screen which, firmly attached to the refractor, shared in its motions. At the lower end of the large tube of the telescope two wooden rings were put on at some distance apart; each having four corresponding holes through which wooden rods, only slightly elastic, projected about one and a half feet. The projection board was fastened in notches cut in these rods at the same distance from the eyepiece, and was held in place by the springing of the rods. This not only assured the perpendicularity of the plane of projection with respect to the optical axis but it also prescribed that the distance of the plane of projection from the eyepiece was always the same when the latter was drawn out to a definite mark corresponding to the sharpest image. To the board was attached a rather stiff sheet of paper on which had been drawn two systems of parallel lines crossing each other at right angles. A single pin, passing through the center of these lines, attaches the paper at the point where the center of the image of the field of the telescope falls. By turning the sheet around the pin, the lines can thus be made parallel to the directions of declination and hour angle. It is only necessary for this purpose to let the sun's limb, or any distinct spot, run across parallel to one of the system of lines, preferably along

<sup>1</sup> Latitude =  $43^{\circ} 3' 17''$

Longitude =  $5^{\text{h}} 1^{\text{m}} 37^{\text{s}} 5 \text{ W.}$

the central line. Since the angular distances from the center are projected toward the tangent, all points which transit describe hyperbolic curves. Thus we have a network of declination and time threads. For measuring differences of declination the central vertical line is graduated like a scale, and since the field of view permits the whole solar image to be seen, the scale-reading can be expressed in seconds of arc with the aid of the known apparent diameter of the sun. As one division has a linear value of  $\frac{1}{8}$  inch (with an angular value of about  $23''$ ), the tenths, and sometimes the twentieths, can readily be estimated. The differences of right ascension are measured by the diurnal motion with the aid of a chronograph. In order to avoid a correction which would arise from the projection above mentioned upon the plane, the transits were so arranged that use was made either of the line passing through the center of the field or of symmetrically situated pairs of lateral threads.

"The eyepiece used is a so-called negative one of the Huyghens form, having two plano-convex lenses with focal lengths of 3.90 and 1.75 inches. The magnification is approximately 75, and the field of view is  $38'$ , so that it embraces on each side  $3'$  more than the whole solar disk. The eyepiece is drawn out 1.45 inches in order to make the image distinctly visible at the distance of the projection board from the eye lens—15.43 inches. The actual magnification of the image is here about 140 times, or the number which we obtain if the magnification given above is multiplied by the quotient of the distance of the table divided by the distance of distinct vision (7 to 8 inches).

"Further explanation is required of the conversion of the scale-distance into arc whereby the distance in declination of a spot from the sun's center is measured. On account of the size of the angles under which the rays fall upon the paper, the tangents can no longer be held to be proportional to the arc, and the value of a scale-division decreases from the center of the field toward the edge. These angles have their vertex at the position for the eye; or rather, in this case, where the eyepiece is drawn out, in more general terms in the point through which all rays pass after emergence from the eyepiece, and therefore the distance of this point from the board is concerned. Instead of computing this from the dimensions of the system of lenses, we in practice get a knowledge of this most simply by pointing the telescope toward the brightly illuminated sky and rendering the emergent pencil visible (as by blowing smoke upon it). Let us denote this distance, expressed in scale-divisions, by  $D$ , the angle of the cone of the sun's disk formed at the intersection by  $G$ ;  $g$  is similarly the angle at the same point between the spot and the sun's center,  $\rho$  is the apparent radius of the sun,  $S$  its magnitude read off from the table,  $s$  the distance of the spot from the sun's center. Then we have

$$\tan G = \frac{S}{D}, \quad \tan g = \frac{s}{D}, \quad \text{whence } \frac{s \tan G}{S \tan g} = 1;$$

therefore

$$\rho \frac{g}{G} = \rho \cdot \frac{s}{S} \cdot \frac{g}{G} \cdot \frac{\tan G}{\tan g}.$$

But the last is the difference in declination of the spot and the sun; therefore

$$\Delta\delta = \rho \frac{s}{S} \cdot \frac{\tan G}{G} \cdot \frac{g}{\tan g},$$

which is most conveniently adapted to calculation in the form

$$\log \Delta\delta = \log s + \log \frac{\rho}{S} + \frac{2}{3} \log \sec G - \frac{2}{3} \log \sec g.$$

A small table of double entry, with the arguments  $s$  and  $\rho$ , gives  $\Delta\delta$  directly. For the apparatus here  $D = 119.0$ , and on the average  $G = 19^\circ 30'$ . The diameter of the solar image measures somewhat over ten inches on the paper.

"The transits for right ascension are as a rule taken four times, twice before and twice after reading off the declinations, each time over one thread. When the number of spots is large, as has often been the case in recent years; and several groups fall at the same hour-angle, each section has to be determined for itself. The usefulness of the chronograph should be particularly recognized in such cases as this where the objects follow each other in rapid succession—often separated by only a fraction of a second. The clock is regulated to mean time so that the differences of right ascension are obtained without further reduction, since the departure of the rate from apparent solar time does not come into consideration, never exceeding  $\frac{1}{3000}$ . The accuracy obtained, as well as the simplicity of the reduction and the whole procedure will be the more readily perceived from the following example. The separate groups of each day are distinguished in order of right ascension by the capital letters, the separate spots of the groups in the same order by the small letters with the attached exponents; but the most conspicuous spot of each group is assigned the letter without an exponent; different nuclei in the same penumbra receive subscripts. This mode of designation is preferable to that of current numbers.

EXAMPLE  
1863. March 13.

"The mean of the times is 0<sup>h</sup> 46<sup>m</sup> 7<sup>s</sup>.2, and the correction of the clock +8<sup>s</sup>.5, so that the observations as taken are valid for 0<sup>h</sup> 46<sup>m</sup> 15<sup>s</sup>.7 mean time.

"The probable error of an observation was deduced to be  $\pm 0^s.11$  from a number of determinations of the time of transit of the sun's radius, by means of the deviations from the average of each day. For a spot the error in general will be somewhat greater; and since on the one hand this has to be multiplied by a number larger than  $\sqrt{2}$ , while on account of being the average of four determinations, it must on the other hand be divided by 2, we may estimate the accuracy of the determination as 1'.5. The probable error in declination will be about the same, since here the limit of reading is from  $\frac{1}{20}$  to  $\frac{1}{10}$  of a scale-division."

The formulae now involved are simply derived by applying the three fundamental formulae of spherical trigonometry to the triangle having as its vertices the spot, the sun's pole and the center of the disk.

Let  $\Delta\alpha$  and  $\Delta\delta$  represent the differences in right ascension and declination of the spot and the center of the disk. Let  $p$  be the "zenith distance of the earth as seen from the spot," and  $n$  be the geocentric distance of the spot from the center of the disk. Then  $n = \rho \sin p$ , where  $\rho$  is the sun's radius.  $P$  is the symbol for the position angle of the spot, reckoned from the east through the north, and  $N$  is the position angle of the sun's pole.  $B$  is the heliographic latitude of the spot,  $B_0$  that of the center of the disk;  $L$  and  $L_0$  are the heliographic longitudes of the spot and of the center of the disk from the node.

Then we have

$$\frac{\Delta\alpha''}{\rho} = \sin p \cos P;$$

$$\frac{\Delta\delta''}{\rho} = \sin p \sin P.$$

$$\begin{aligned} \sin B &= \cos(p-n) \sin B_0 + \sin B_0 \sin(p-n) \sin(P-N); \\ \cos B \cos(L-L_0) &= \cos(p-n) \cos B_0 - \sin B_0 \sin(p-n) \sin(P-N); \\ \cos B \sin(L-L_0) &= \sin(p-n) \cos(P-N). \end{aligned}$$

For adaptation to logarithmic computation, let

$$\begin{aligned} g \sin \xi &= \sin(p-n) \sin(P-N), \\ g \cos \xi &= \cos(p-n). \end{aligned}$$

Then we get

$$\begin{aligned} \sin B &= g \sin(B_0 + \xi); \\ \cos(L-L_0) \cos B &= g \cos(B_0 + \xi); \\ \sin(L-L_0) \cos B &= \sin(p-n) \cos(P-N).^1 \end{aligned}$$

<sup>1</sup> It seems that it would have been more expeditious to use addition and subtraction logarithms and employ the first and third of the fundamental formulae, solving  $(L-L_0)$  by the tangent only when necessary.

An example of the author's reduction sheet now follows:

261° 8'  
 $L_0$

181° 4'  
 — 178 56  
 long. of  
 prime meridian  
 from node

The scheme of computation explains itself. In the ninth column the author sometimes gives  $n$  and sometimes  $\frac{\sin(p-n)}{\sin p}$ , for either of which a table with argument  $\sin p$  could easily have been constructed. The elements of the sun's rotation, as employed by the author, are:

Longitude of the ascending node of sun's equator =  $73^{\circ} 40'$  for 1850.

Inclination of axis to axis of ecliptic =  $7^{\circ} 15'$ .

(These were the values recommended by Carrington.)

Mean daily rotation angle =  $842'.04 = 14^{\circ}.034$ ,

or Mean sidereal rotation period = 25.652 days.

This value was derived by Dr. Peters from his observations of 803 positions of 286 spots made at Naples in the thirteen months from September 1845 to October 1846, as stated in his paper read at the Providence meeting of the American Association, 1855.

"First solar meridian that in which the earth was at Greenwich mean noon 1860 January 0."

"I reckon the longitudes in the sense that any point of the heavens would, as a result of the sun's rotation, successively pass increasing meridians. This would correspond on the earth to counting longitudes westward as positive" (*A. N.*, 71, 241, 1868).

"To avoid ambiguity, it may be prefaced that the heliographical longitudes are counted in the direction opposite to that of the rotation of the sun (or what corresponds upon the earth from the east toward the west), and a spot is said to be *following* another neighboring one, when the former has greater heliographical longitude,—when by the rotation of the sun, it will come later into the same heliocentric position in regard to the fixed stars than the *preceding* spot." (*Astronomical Notices*, No. 29, March 18, 1862.)

In order to facilitate the comparison of longitudes given by Peters with those of Carrington and those at Kew and at Greenwich, a conversion-table is given for each date of observation by Peters. A rigorous comparison cannot be made with Carrington's positions, as the latter were derived from assumed values of the longitude of the node and inclination, to which small corrections were obtained by Carrington from his whole series of observations. The difference is not, however, of any consequence in the identification of spots.

The following table, which has been calculated by Mr. Philip Fox, gives the angular distances between the prime meridians of the systems of Carrington and Peters for Clinton noon of each day when Peters observed. The conversion is effected by merely subtracting Peters' *L'* from the tabular value for the date (increased by  $360^{\circ}$  where necessary), after due allowance has been made for the difference in time of observation and in longitude of the place of observation.

TABLE OF ANGULAR DISTANCES BETWEEN THE PRIME MERIDIANS OF PETERS AND CARRINGTON  
For Clinton noon of each day on which Peters observed.

### COMPARISON OF POSITIONS OF SPOTS OBSERVED BY PETERS WITH THOSE OBTAINED BY CARRINGTON AND AT KEW

Carrington's classic series of observations, entitled "Observations of the Spots on the Sun from November 9, 1853, to March 24, 1861, Made at Redhill" (published in 1863), overlaps that of Dr. Peters during the period from May 23, 1860, to March 24, 1861, in which interval observations were made by the two observers on the same day in fifty-two instances. Carrington's telescope had an aperture of 4.5 inches and a focal length of 52 inches. He observed transits of the projected image across bars in the focal plane inclined 45° to the direction of the diurnal motion.

The Observations made at Kew<sup>1</sup> with the photoheliograph, which in effect form a continuation of the Redhill series, were begun on February 7, 1862, and were continued for ten years. They accordingly cover the last eight years of Dr. Peters' work. The interval not included by the English observations was from March 25, 1861, to February 6, 1862, although the Kew instrument was being employed in a preliminary way during this time, so that the gap might perhaps be fairly bridged without the records of Dr. Peters. The Kew photoheliograph had an aperture of 3.5 inches and a focal length of 50 inches.

<sup>1</sup> Warren de la Rue, Balfour Stewart, and Benjamin Loewy, "Researches on Solar Physics: Heliographic Positions and Areas of Sun-Spots Observed with the Kew Photoheliograph During the Years 1862 and 1863. *Philosophical Transactions*, 159, 1-110, 1868.

Spoerer's observations, as published (1874) in his first extensive memoir, "Beobachtungen der Sonnenflecken zu Anclam," cover the period from January 1, 1861, to September 7, 1867. He first used a "3½-foot" telescope and ring micrometer; later he employed a "seven-foot" telescope, with a network of ruled lines in the focal plane.

It is thus evident that the instrument employed by Peters was superior to those of his contemporaries, and his method of reduction was not less rigorous. A comparison of his positions of spots with those obtained elsewhere on the same dates is therefore of interest. Inasmuch as Spoerer used quite different elements of the sun's axis, and a different period of rotation from those employed by the other observers here involved, a new reduction of his positions would be necessary before any comparison could be made. This comparison is therefore not feasible here.

In the case of Carrington's measures the conversion table given above serves to make the positions of Peters conform in longitude with those of Carrington, except for the difference in the value of the longitude of the node. For the purpose of comparison, 108 spots observed on fourteen days in 1860 by both Carrington and Peters were collected, only such spots being employed as could be regarded as certainly identified. The results are as follows:

#### MEAN OF DIFFERENCES, PETERS-CARRINGTON

In longitude, with respect to sign . . . . .	+ 39.2
In longitude, without respect to sign . . . . .	45.2
In latitude, with respect to sign . . . . .	+ 13.4
In latitude, without respect to sign . . . . .	28.8

Inasmuch as Carrington actually used a value for  $N$  smaller by  $47'$  than he subsequently derived from his whole series of observations, his values in longitude should be increased by that amount. Hence the outstanding mean difference in longitude, P.-C., reduced to the same longitude of node, becomes  $-8'$ . Carrington's use of  $I=7^{\circ} 10'$  instead of  $I=7^{\circ} 15'$  introduces a slight difference in the individual latitudes, but this is practically balanced in the series of observations compared.

We therefore conclude that there is no systematic difference between the positions of Carrington and Peters amounting to more than  $0^{\circ}.2$ —a satisfactory agreement. Accidental differences averaging from  $0^{\circ}.5$  to  $0^{\circ}.75$  occur, however. These differences are doubtless due, in large measure, to the fact that two observers can hardly agree in setting upon the nucleus of so indefinite an object as a sun-spot. The actual changes in the spots between the time of their observation in England and in America are also involved.

The observations at Kew and Clinton are strictly comparable, after the latter are corrected in longitude for direction and rotation-period by our conversion table. For the purpose, 114 spots measured at both stations on 21 days between February 7, 1862, and July 2, 1863, were used, with these results:

#### MEAN OF DIFFERENCES, PETERS-KEW

In longitude, with respect to sign . . . . .	+ 7.6
In longitude, without respect to sign . . . . .	19.0
In latitude, with respect to sign . . . . .	- 7.0
In latitude, without respect to sign . . . . .	17.4

We may thus infer that differences of a systematic nature amount to scarcely more than  $0^{\circ}.1$  in either co-ordinate, while the accidental differences average  $0^{\circ}.3$ . The better accordance than that in case of Carrington is presumably due to the superiority of the Kew positions. Very considerable differences, however, are seen in the Kew measurements of the same spot when two photographs were made on the same day. We find that on ten of the twenty-one days used in the comparison of Peters and Kew such duplicate observations were made at Kew, the average interval between the two plates being  $0^{\text{d}}.064$ . A comparison for 61 spots gave the following results, expressed in the sense first measure minus second measure:

In longitude, with respect to sign . . . . .	- 11.3
In longitude, without respect to sign . . . . .	17.2
In latitude, with respect to sign . . . . .	- 0.3
In latitude, without respect to sign . . . . .	9.2

The accidental differences in the longitudes of the two Kew plates are therefore practically of the same magnitude as those of Peters-Kew; while those in latitude are only one-half smaller. This clearly tends to confirm the high opinion as to the accuracy of the positions of Dr. Peters which a careful examination is certain to give to anyone.

The regret is increased that his observations could not have been published shortly after they were concluded and during his lifetime. It is evident that they are of such a degree of accuracy that they might safely be made the basis of investigations of various problems of the sun's rotation, aside from their value as records of the solar activity.

The editor acknowledges his indebtedness to his wife for assistance in reading the proofs, and to Mr. Philip Fox for aid in various ways; also to Professor Samuel J. Saunders, of Hamilton College, for his thorough but unavailing searches for the missing papers of Dr. Peters.

THE UNIVERSITY OF CHICAGO  
September, 1907

# HELIOGRAPHIC POSITIONS OF SUN-SPOTS

In the following table of observed positions of sun-spots, the time given is Clinton mean time (astronomical) for the civil date. The first column gives the current designation of the spot by a letter, as used on the author's drawings and chronograph records. Capital letters are used for groups, small letters for spots, letters with subscripts for different nuclei within the same penumbra, letters with exponents for different spots in the same group; a letter without exponent or subscript is assigned to the most conspicuous spot of the group.  $\Delta\alpha$  is the observed difference in time between the transit of the spot and the mean of the transits of the limbs, or is the difference of right ascension of spot and center of disk.  $\Delta\delta$  is the corresponding difference in declination. In cases of large nuclei, the edges were often observed, designated by  $n$  and  $s$  for declination; the means of the  $\Delta\alpha$  and  $\Delta\delta$  were then used in the computations. The size of the nuclei may be derived from these data. Measures were also frequently made on the margins of the penumbrae, but heliographic positions were not computed, and those measures, as well as the very infrequent measures of faculae, have been here omitted. The heliographic latitude is given in the next column under the heading  $b$ . In the column headed  $L$  is found the longitude from the node; under  $L'$ , the heliographic longitude. The letter in the last column serves to identify the spot on the next following date. In cases where the identification was regarded as doubtful by author or editor, the letter has been omitted.

The gap in the observations from August 17, 1863, to November 2, 1864, is not due to a deficiency in the records, but to a prolonged absence of Dr. Peters in Europe.

# AUTHOR'S NOTES ON WEATHER CONDITIONS DURING OBSERVATIONS

1860 June 14. Hazy; the spots very dim.  
 17. Clear sky with clouds.  
 18. Clear sky.  
 19. Many clouds but clear between them; limb and spot much undulating.  
 20. Hazy and many clouds. Observation in clear sky between the clouds.  
 27. Clear sky; the observations with interruptions by clouds.  
 28. Many clouds, though sky clear.

July 4. Sky clear with clouds.  
 6. Sky clear, without clouds, and calm.  
 7. Clear; interrupted by many clouds. Limbs much undulating.  
 8. Interrupted by many clouds.  
 9. Many clouds.  
 11. Very clear; strong wind.  
 15. Sky clear with clouds.  
 18. Hazy toward noon.  
 20. Clear.  
 22. Clear sky.  
 24. Clear; strong wind; limb tremulous.  
 28. Clear; but limbs as well as spots tremulous.  
 30. Clear with clouds.  
 31. Clouds intervened so that only two sets in R. A. could be obtained.

Aug. 1. Clear sky, almost cloudless; the limbs somewhat undulating.  
 3. Hazy.  
 5. Very clear and calm.  
 6. Very clear and calm; cloudless.  
 15. Limbs much undulating.  
 16. A little hazy.  
 17. Clear with clouds; limbs undulating.  
 18. Many clouds.  
 19. Clear and very calm.  
 20. Many clouds.

Sept. 15. Clear sky.  
 17. Many clouds.  
 18. Clear sky.  
 20. Observations with interruptions by clouds.  
 22. Strong wind, almost a storm. Limbs and spots much trembling.  
 23. Clear.  
 24. Clear but a strong gale is shaking the telescope.  
 25. Many clouds, and observations for that reason hurried.  
 26. Violent gale; clear.  
 28. Strong wind; great many clouds.  
 30. Clear and calm. Spots very much undulating, perhaps from the sun heating the roof.

Oct. 6. Clear with clouds.  
 7. Clear and calm.  
 10. Clear sky.  
 12. Clear.  
 15. Hazy.  
 16. Hazy, but images steady.  
 18. Hazy.  
 19. Calm though a little hazy; undulating.  
 24. With clouds.  
 25. Clear with a few clouds. Limbs much undulating.  
 27. Clear with clouds, the spots, however, very badly swimming.

Oct. 30. Very thickly hazy.  
 31. Great many clouds; almost overcast.

Nov. 4. Many clouds.  
 5. Great many clouds.  
 7. Many clouds.  
 8. Fine and clear; then clouds arising and the limbs undulating.  
 16. Many clouds.  
 22. Clear and calm.  
 24. Suddenly cleared up after a snow storm.  
 25. Hazy with clouds.  
 28. Clear and calm.

Dec. 14. Clear and calm; the spots swimming, however.  
 15. Clear sky, but limbs and spots very much waving and swimming. No sharp view of the spots could be obtained but for short moments.  
 23. Images steady though rather dim, the sky being hazy.

1861 Jan. 2. Clear, and images rather steady.  
 4. Hazy and very dim; spots indistinct.  
 5. Spots sharp and distinct.  
 12. Hazy, and clouds after third set.  
 22. Clear and bright.  
 23. Smoky; images dull; smaller spots invisible.  
 25. Hazy; steady and pretty distinct images.  
 27. Spots swimming in the beginning; then more steady.

Feb. 1. Clear with cirrhi. Steady; all the spots small; the whole disk mottled. ;  
 6. Clear; spots distinct; wind.  
 12. Clear and fine; steady, sharply defined images.  
 14. Very hazy; only the large spots visible, and then, too, very dim.  
 16. Clear and very distinct.  
 22. While making sketch perfectly clear; then hazy so that the smaller spots only dim.  
 25. Pretty clear, little haze; at times unsteady.  
 26. Clear though the spots somewhat swimming.  
 27. Clear.  
 28. Rather hazy.

Mar. 4. Hazy; the penumbras very indistinct; later clearer.  
 7. Clear, but swimming images; strong W. N. W. wind.  
 11. Clear.  
 15. Hazy; images ill-defined.  
 16. Clear.  
 18. Clear and cold; spots much swimming.  
 19. Clear, though spots badly swimming.  
 20. Clear.  
 22. Clear.  
 23. Clear; wind E.; afterwards hazy.  
 25. Very hazy, especially at the end of the observations.  
 28. Clear.  
 31. Very clear, but limbs and spots much undulating.

Apr. 4. Very clear and calm.  
 5. Clear, bright, and pretty steady, though heavy west wind.  
 6. Clear, spots a little blurred; wind E.  
 7. Hazy, with clouds; the spots and limbs very steady and well seen.  
 8. Clear.  
 9. Clear; strong E. wind; spots distinct, limbs undulating.  
 10. Clear; E. wind; spots and limbs a little dancing.  
 11. Clear; spots a little swimming.  
 19. Many clouds.

- 1861 Apr. 21. Clear; strong W. wind; undulation of limbs.  
 22. Very hazy.  
 23. Rather clear.  
 25. Strong wind and many clouds.  
 26. Clear but stormy.  
 27. Clear; some interruptions by clouds.  
 29. Clear; the W. wind sometimes shaking the telescope.
- May 2. Clear; strong W. wind.  
 4. Clear but unsteady.  
 5. Clear and calm.  
 7. Very clear, after rain storm; strong wind.  
 9. Many clouds.  
 12. Clear and steady.  
 14. Clear, immediately after rain; heavy W. wind.  
 15. Clear.  
 19. Steady; a little hazy.  
 21. Very clear, with many clouds; between second and third sets little showers of rain.  
 23. Clear and calm.  
 25. By polarizing eyepiece and scale. The positions today rather uncertain.  
 30. By polarizing eyepiece and scale.  
 31. By polarizing eyepiece and scale; perfectly clear and calm.
- June 1. Clear; at times some haze.  
 5. Clear with clouds; wind E.  
 7. Clear.  
 9. Clear and steady.  
 10. Clear but unsteady; strong wind; some haze.  
 12. Quite clear, but strong gale.  
 13. Clear with clouds; stormy, the telescope shaking.  
 17. Clear with clouds; wind N.  
 18. In the beginning clear with clouds; then hazy.  
 20. Clear with flying clouds.  
 22. Clear and calm with clouds.  
 24. Clear with many clouds. Strong W. wind.  
 25. Pretty clear, though somewhat hazy.  
 27. Clear; strong W. wind.  
 29. Very clear.
- July 1. Very hazy.  
 3. Very clear.  
 5. Very clear and steady.  
 7. Hazy with clouds, sometimes very clear.  
 9. Very clear, when not covered by any of the flying clouds.  
 11. Many clouds, though very clear between them.  
 17. Clear and calm.  
 19. Very hazy.  
 21. Very clear with clouds.  
 23. Clear.  
 25. Bright and clear.  
 27. Clear and bright.
- Aug. 1. Clear.  
 2. Clear.  
 4. Clear though stormy S. W. wind.  
 11. Clear and bright. Limbs undulating.  
 14. Clear between clouds.  
 16. Clear with clouds.  
 18. Clear with many clouds.  
 19. Very hazy.
- Sept. 7. Clear with clouds.  
 9. Hazy with clouds. Limbs and spots undulating.  
 12. Many clouds, else clear.  
 15. Very cloudy and hazy.  
 22. Clear with clouds.  
 24. Clear; many clouds.  
 26. Clear.  
 29. Many clouds.

- Oct. 1. Clear.  
 8. Hazy and thin clouds.  
 10. Very clear.  
 12. Limbs very much undulating after rain. Sky clear between clouds.  
 14. Clear.  
 20. Clear gaps between clouds.  
 21. Clear.  
 25. Clear; a little hazy.  
 26. Hazy; sometimes clear.  
 27. On account of clouds, got only two sets in R. A.  
 28. Perfectly clear, but badly swimming.  
 29. Very clear and rather steady.
- Nov. 1. Little hazy.  
 10. Clear, but limbs and spots badly swimming.  
 12. Pretty clear, with some clouds; strong W. wind.  
 14. Many clouds; strong W. wind.  
 15. Clear.  
 18. Extremely hazy during the observations, so that of the fainter spots only one set in R. A. could be obtained; of the larger ones, two.  
 19. Beautifully clear.  
 20. Clear with thin clouds.  
 22. Pretty clear, sometimes a little hazy and blurred.  
 24. Very hazy, though steady; later clearer.  
 25. Clear while making the sketch; thin hazy clouds; very steady images.  
 26. Very fine, clear and calm.  
 27. Extremely hazy after finishing the sketch. Observations difficult; halo around the sun.
- Dec. 2. Very clear and steady, though strong W. wind.  
 3. Through gaps between the clouds. Sometimes pretty clear. Limbs much undulating.  
 4. Clear while making the sketch. After that it became hazy.  
 5. Clear, the spots steady, but the sun's limbs undulating.  
 7. Clear but very much undulating.  
 10. Clear, somewhat hazy; undulating.  
 11. Very clear, but unsteady. A gale is blowing from the W. The narrowness of the dome did not permit to read more than a few declinations, the sun being already low.  
 12. Clear and calm, but spots sometimes much blurring.  
 13. Clear; images sharp and rather steady.  
 14. Remarkably steady and fine; a little hazy.  
 15. Clear and pretty steady.  
 16. A little hazy; spots, however, very neatly defined, though a strong gale blowing from W.  
 17. Clear, steady, and well defined.  
 22. Very hazy; spots calm, but very dim and the smaller spots not visible. Fine halo with colors.  
 25. Quite clear; blurring.  
 28. Very clear and rather calm.  
 30. Sky almost overcast with a few gaps between clouds.  
 31. It suddenly cleared up for an hour and was very fine during the observations.
- 1862 Jan. 2. A terrible gale from the W. had blown the whole night, still continuing though with less severity. The sky is very clear. The sun's limbs sometimes undulating strongly.  
 3. Clear.  
 4. Clear, somewhat undulating.  
 7. Images very neat and steady.  
 11. Hazy, the dots visible only at times; limbs undulating.  
 13. Clear during the sets of R. A., but while reading the declinations many clouds and limbs undulating.

- 1862 Jan. 14. Fine, clear; spots beautifully well defined; solar limbs a little undulating.  
 16. Many clouds; clear while observing, but strong gale from the W. shaking the telescope.  
 24. Clear; moderately sharp images.  
 27. Very clear and pretty steady.  
 31. Very clear, but limbs and spots badly swimming; sky without clouds.
- Feb. 5. Thin clouds, images at times very sharp and distinct.  
 7. Clear and pretty steady; sometimes undulations produced by passing clouds.  
 8. Very hazy; images sometimes, however, quite distinct and calm.  
 11. Clear and steady.  
 16. Images neat and steady.
- Mar. 8. Some haze; images calm and well defined.  
 9. Clear; images neat; little hazy.  
 11. Clear and well defined; some few clouds.  
 13. Hazy; somewhat undulating  
 18. Suddenly cleared up; pretty strong W. wind; images neat and steady.  
 19. Clear and pretty steady.  
 20. Clear; some haze; images a little unsteady.  
 25. Very clear; strong W. wind.  
 26. Very clear; heavy W. wind.  
 27. Pretty clear, steady and neat.  
 28. Clear, but not very steady; strong N. W. wind.  
 29. Clear, but images not very sharp; undulating.
- Apr. 4. Clear, little hazy; steady.  
 6. Many clouds; sometimes very clear for short intervals. Strong W. gale.  
 7. Hazy; limbs a little undulating.  
 9. Clear; good images.  
 10. Clear and fine.  
 11. Fine, clear and steady.  
 12. Fine and clear.  
 13. Clear.  
 20. Very hazy though steady.  
 22. Clear with many clouds; wind shaking telescope.  
 24. Clear; strong wind from W.  
 25. Very hazy though calm; spots undulating.  
 26. Clear and distinct.  
 27. Many clouds; limbs undulating; at times the sky pretty clear.
- May 4. Clear and fine between many clouds.  
 5. Very clear between the clouds; strong W. wind.  
 6. Clear, but a very strong gale from W. shaking telescope.  
 8. Clear but windy.  
 10. Very clear, but strong W. wind which produces at times undulations.  
 11. Clear and fine.  
 12. Clear.  
 14. Very fine and clear.  
 15. Quite clear; spots a little undulating.  
 17. Clear, with clouds; limbs undulating.  
 20. Clear; the limbs a little undulating.  
 22. Clear, with clouds; the wind blowing a gale from the W.  
 24. Clear; wind.  
 26. Hazy, still sufficiently clear for the small dots. S. wind sometimes shaking the telescope.  
 28. Clear, but strong wind.  
 30. Clear, but very hazy after second set of measurements.
- June 5. Hazy in the beginning, then very clear; steady.  
 8. Clear, with many clouds; not very steady.  
 20. Clear, some clouds.  
 22. Clear, with many clouds.
- June 26. Clear and steady.  
 29. Clear and pretty steady, though S. wind.
- July 1. Clear.  
 3. Very clear, with clouds; wind E.; spots somewhat swimming.  
 6. Hazy; the solar disk on the projection table reddish; the spots, however, neat and steady.  
 7. Veil of haze over the sky rather thick.  
 8. Many clouds, clear between; limbs undulating.  
 10. Clear.  
 11. Very clear.  
 13. Hazy and clouds; limbs undulating.  
 15. Interrupted by cloudiness so that not all of the declinations could be read off.  
 18. Many clouds; limbs undulating strongly, sometimes also the spots.  
 19. Clear, not very steady; wind S.  
 25. Clear, some clouds.  
 27. Clear, somewhat undulating.  
 29. Clear, with flying clouds; limbs very much undulating.  
 31. Quite clear and pretty steady; a little windy.
- Aug. 2. Haze and clouds in the beginning, then very clear.  
 4. Many clouds; limbs undulating; wind E.  
 6. Clear, with clouds; strong wind; images a little blurred.  
 8. Many clouds; at times very clear; wind.  
 10. Clear and well defined.  
 12. Very clear and images neat; strong wind.  
 14. Thick cloudy haze; difficult observation.  
 15. Very clear and calm.  
 17. Many clouds, very clear between; strong W. wind.  
 18. Quite clear, but spots sometimes badly swimming.  
 20. Clear, but limbs strongly undulating; wind S.  
 22. Very clear, though strong S. wind.  
 24. Clear, but bad swimming of images.  
 26. Very clear and steady.  
 29. Clear, with clouds; images rather unsteady; strong W. wind.  
 31. Very clear, though images not quite without undulations.
- Sept. 3. Very clear though somewhat undulating.  
 5. At times pretty clear; undulating; S. wind.  
 7. Many clouds, sometimes very clear; S. wind.  
 9. Many clouds; strong undulations.  
 11. Clear, but strong undulations of limbs.  
 13. Clear.  
 15. Very clear; images very fine and neat.  
 17. Very clear and neat between the clouds; strong S. wind.  
 19. Clear and pretty. In second set some clouds.  
 22. Clear with clouds; limbs sometimes strongly undulating.  
 23. Very clear and fine; steady.  
 25. Clear and steady.  
 27. Very clear; sometimes strong undulations of limbs.
- Oct. 3. Through clouds; sky almost entirely covered. Clear at noon for a moment when the sketch was made.  
 5. Strong gale from N. W. and images in great undulation (undulations on limb retrograde).  
 7. Neat and clear.  
 12. Hazy, though steady and spots well seen.  
 15. Hazy, many clouds; sometimes clear.  
 18. Clear with some clouds intervening.  
 20. Clear with strong W. wind; undulating limbs.  
 23. Very clear, but many clouds, and strong W. gale.  
 28. Very clear and steady; haze at the end while reading the declinations.  
 31. Images very neat and fine; very steady.
- Nov. 2. Very hazy; limbs undulating; smaller spots visible only at intervals.

- 1862 Nov. 4. Very clear; spots sometimes swimming.  
 11. Sky without clouds; limbs and spots badly swimming and dancing.  
 14. Very clear; steady.  
 15. Clear; limbs a little undulating; wind N. W.  
 25. A little hazy; images very good and sharp.  
 30. Hazy, though the two spots were seen sometimes; neat images.
- Dec. 11. Clear, but strong undulations.  
 12. Very clear and neat images.  
 17. Clear between many clouds.  
 20. Clear, but strong N. wind, and limbs and spots much undulating.
- 1863 Jan. 18. Quite clear, but spots badly swimming.  
 19. Hazy; limbs undulating.  
 25. Clear and steady.  
 30. Very fine images, though near the end of the observations some haze or thin clouds.  
 31. Clear and fine.
- Feb. 2. Clear; heavy W. gale shaking telescope.  
 4. Sky entirely clear, but limbs and spots horribly blurring; only the larger spots visible.  
 8. Hazy; at times rather thick.  
 11. Haze, though limbs and spots pretty neat.  
 14. Cloudless, but spots and limbs badly swimming.  
 15. Clear, between many clouds; at the close hazy.  
 16. Very fine and clear, though the telescope is badly shaken by the wind.  
 17. Clear, sometimes blurring.  
 18. Steady; very hazy, so that smaller spots invisible.  
 21. Clear; but strong wind shaking telescope.  
 23. Clear and fine.  
 25. Very fine and clear.  
 28. Clear; blurring.
- Mar. 2. When the sketch was made at noon the sky was beautifully clear. Then it clouded up and the observations could not be obtained until the sun was low, and its limbs already a little undulating. Still the images of spots neat.  
 4. Clear; strong N. W. wind sometimes shaking the telescope.  
 5. Clear, but much blurring.  
 9. Clear between clouds; blowing awfully.  
 10. Neat images and calm, though thin clouds.  
 11. Clear and fine, toward the close some wind.  
 12. Sky very heavy; cold W. wind; spots swimming.  
 13. Haze rather thick, spots and limbs much blurring.  
 14. Hazy and cloudy; strong W. wind.  
 15. Clear; spots and limbs much blurring.  
 16. Hazy, though steady and well defined.  
 18. Clear; neat images.  
 19. Clear and fine.  
 20. Clear; spots very much swimming, limbs blurring.  
 30. Very fine, clear, and steady.
- Apr. 3. Clear.  
 4. Clear; limbs undulating a little.  
 9. Quite clear; strong W. wind.  
 11. Haze very thick; the dots are seen with difficulty; strong S. W. wind.  
 13. Fine and clear; calm.  
 14. Fine and clear.  
 19. Very fine day.  
 21. Hazy; though spots well seen with some undulations of limbs.  
 22. Quite clear; limbs at times undulating.  
 23. Steady; some haze.

- Apr. 24. Hazy.  
 26. Clear, but strong W. wind; limbs strongly undulating.  
 29. Thick haze and clouds; E. wind.  
 30. Clear and fine.
- May 1. Clear and fine.  
 2. Smoky sky.  
 3. Smoky sky; wind E.; limbs and spots undulating a little.  
 5. Very hazy or cloudy, sometimes clear.  
 8. Clear, neat, and pretty steady.  
 9. Rather hazy, though sufficiently clear and steady.  
 10. Steady, but very hazy.  
 11. Very clear.  
 13. Clear.  
 17. Clear with many clouds.  
 19. Clear and fine; a little trembling by wind.  
 21. Very fine and steady images; sky rather hazy.  
 23. Steady; hazy.  
 26. Fine, clear; little undulation of limbs.  
 28. Clear and steady.  
 30. Very clear: S. wind.
- June 4. Clear with clouds.  
 9. Very hazy, and strong N. W. wind.  
 11. Clear with clouds; wind E.  
 13. Clear; undulating.  
 15. Clear; strong W. wind.  
 18. Very hazy.  
 20. Hazy though steady.  
 22. Many clouds, and soon overcast.  
 24. Very clear, between many clouds.  
 26. Clear, little undulating.  
 28. Clear.  
 30. Almost entirely overcast.
- July 2. Clear with many clouds; limbs undulating.  
 4. Many clouds, but otherwise clear.  
 18. Nicely clear.  
 20. Very clear with clouds; limbs undulating.  
 22. Clear.  
 24. Clear; limbs swimming.  
 28. Clear, some haze; undulating.
- Aug. 2. Clear and steady.  
 7. Clear, a little hazy, calm.  
 9. Clear, interrupted by clouds; limbs sometimes undulating.  
 11. Clear, with clouds; undulations.  
 13. Clear; spots sometimes dancing.  
 15. Hazy, with many clouds.  
 17. Clear; some undulations.
- 1864 Nov. 2. Clear, but undulations by strong wind.  
 6. Clear, strong S. wind.  
 7. Very hazy with clouds; only the larger spots well visible but pale; wind S.  
 10. Clear with clouds; strong W. wind; heavy undulations.  
 14. Clear.  
 18. Between clouds and with hazy sky.  
 19. Fine and beautiful; calm.  
 22. Cleared up after a rain and snow storm; spots neat.  
 25. Through haze and clouds; sometimes more distinctly seen.
- Dec. 1. W. wind, warm, clear, with clouds, then hazy.  
 8. Heavy W. wind after storm and many clouds; images very much trembling.  
 9. Clear and steady.  
 13. Spots badly swimming and undulating; a little hazy.  
 18. Clear and fine; calm; spots and limbs, however, badly swimming, except in the last two sets.  
 20. Clear.

- 1864 Dec. 22. Clear, but not very steady; wind W., blowing hard.  
 25. Clear, but S. wind gives very bad images.  
 27. Hazy and many clouds, with S. wind.  
 31. Suddenly cleared up after snowstorm, distinct and pretty calm.
- 1865 Jan. 2. Clear, between clouds of haze.  
 8. Clear.  
 11. Clear and steady.  
 12. Clear and steady, undulating at the close.  
 16. Clear and sharp; telescope sometimes trembling from strong W. wind.  
 18. Clear and fine.  
 20. Beautiful sky; clear, sharp, and steady.  
 24. Clear between clouds with heavy W. wind sometimes shaking the telescope.  
 25. Clear with many clouds and strong W. wind.  
 27. Haze rather thick; images calm.
- Feb. 2. Clear with fresh W. wind.  
 12. Very hazy.  
 13. Clear and fine.  
 15. Very hazy.  
 17. Clear; blurring.  
 18. Hazy, though images well defined; strong W. wind.  
 21. Sky quite clear; the spots and limbs swimming and undulating.  
 24. Perfectly clear; blurring.  
 27. Quite clear; limbs a little undulating
- Mar. 5. Calm and pretty clear; a little hazy.  
 6. Clear, though very much blurring.  
 10. Storm from the W. shaking the telescope; clouds and snowdrift.  
 11. Clear and steady.  
 12. Clear and cold.  
 14. Steady, but rather hazy.  
 16. Clear with clouds; strong S. wind.  
 17. Images well defined though observed through clear gaps between many clouds; strong W. wind.  
 19. Clear, neat, and well defined images.  
 21. Hazy, calm; limbs a little undulating.  
 23. Clear; images well defined; wind from west rather strong.  
 27. Clear and fine.  
 28. Clear and fine, though limbs undulating
- Apr. 1. Clear between clouds; strong W. wind.  
 2. Very clear and sharply defined limbs; strong N. W. wind.  
 9. Clear; blurring.  
 13. Very clear between clouds; strong W. wind.  
 17. Clear but extremely blurring images.  
 19. Clear, a little hazy.  
 24. Very clear with clouds and strong W. wind.  
 26. Clear between clouds; strong S. wind.  
 27. Clear in the beginning, then becoming suddenly overcast so that only two sets in R. A. and only part of the declination were obtained.  
 30. Clear.
- May 2. Clear sky with clouds; calm.  
 3. Clear, many clouds with rather strong wind.  
 5. Hazy; thin clouds; wind E.  
 7. Clear between clouds.  
 12. Clear; sometimes strong undulations.  
 13. Clear; not without undulations.  
 15. Clear.  
 17. Hazy; pretty steady.  
 21. Clear with clouds.  
 23. Many clouds, clear between.  
 26. Clear and fine.
- May 30. Fine and clear; wind strong, W.  
 31. Hazy, but images clear and well defined; steady.
- June 1. Clear, and pretty steady.  
 2. Smoky sky; spots, however, distinct.  
 4. Clear and fine images, notwithstanding clouds and wind.  
 7. Clear and fine.  
 8. Clear and steady, somewhat blurred.  
 11. Clear and fine between the clouds.  
 12. Clear.  
 14. Clear.  
 17. Very fine and clear.  
 23. Clear and fine.  
 27. Clear.  
 28. Clear and fine; wind W., rather strong.  
 29. Clear.  
 30. Clear with many clouds.
- July 2. Clear; undulations; strong W. wind.  
 5. Fine and clear; the strong W. wind annoying.  
 8. Clear with many clouds; limbs undulating.  
 9. Clear, undulations with W. wind.  
 10. A little hazy; blurring images.  
 11. Fine and clear; sometimes clouds.  
 17. Clear and fine between clouds.  
 18. Little hazy.  
 21. Clear.  
 23. Clear and fine.  
 27. Fine and clear.  
 29. Clear with many clouds.  
 30. Clear; limbs a little undulating.
- Aug. 4. Clear.  
 8. Clear.  
 9. Clear and calm.  
 12. Clear.  
 14. Clear; blurring images.  
 16. Hazy with clouds.  
 18. Clear.  
 19. Clear and distinct.  
 20. Clear.  
 24. Clear with many clouds; strong W. wind.  
 26. Clear and rather fine.  
 27. Clear, between many clouds.
- Sept. 6. Clear and fine.  
 7. Hazy, calm and steady.  
 10. Many clouds; strong S. W. wind.  
 12. Fine and clear.  
 14. Clear with many clouds.  
 15. Clear.  
 17. Many clouds; very clear between them.  
 19. Clear and fine between clouds.  
 22. Very clear; little undulations.  
 24. Clear with wind and clouds.  
 25. Very clear after rain; strong W. wind.  
 27. Very calm and quite serene; images blurring with S. E. wind.  
 29. Very fine, clear and steady.
- Oct. 1. Very clear and fine between the clouds.  
 3. Clear between many clouds.  
 6. Very clear, with clouds; strong W. wind.  
 9. Clear.  
 11. Very fine and steady.  
 13. Clear, but strong undulations.  
 16. Very many clouds; strong N. W. wind.  
 17. Clear; a little haze; calm.  
 19. Very many clouds; clear between them; images steady.
- Nov. 11. Very hazy; limbs and spots not very distinct.  
 13. Steady images, but sky very thick.  
 15. Very thick haze; later the sky better, though still hazy.

1865 Nov. 16. Clear; limbs undulating.  
 24. Clear with clouds.  
 26. Clear between many clouds; blurring.  
 27. Gaps between many clouds.  
 30. Undulating.  
 Dec. 3. Very smoky; limbs and images very sharp and steady.  
 5. Quite clear; strong undulations; fresh N. W. wind.  
 11. A little hazy; images steady; S. wind.  
 16. Rather hazy.  
 22. Clear; blurring images.  
 23. Clear.  
 31. Clear; some undulations; S. wind.  
 1866 Jan. 3. Clear and tolerably steady.  
 5. Images very bad, indistinct and blurring.  
 7. Badly blurring.  
 9. Pretty good images.  
 14. Sky clear; images undulating and swimming.  
 17. Hazy with S. W. winds  
 18. Fine and pretty steady.  
 22. Clear between clouds; strong W. wind.  
 23. Very hazy and spots extremely dim.  
 24. A little hazy.  
 27. Much blurred.  
 31. Steady; clear in the beginning and then clouding up.  
 Feb. 5. Hazy clouds coming up; images rather steady and distinct.  
 7. Extremely undulating and blurring.  
 15. Wind strong after a snow storm; images undulating.  
 16. Clear and images well defined.  
 17. Clear; undulating limbs.  
 22. Hazy, then overcast.  
 26. Clear, blurred images.  
 28. Hazy, though calm and steady.  
 Mar. 1. Clear between hazy clouds; steady.  
 2. Clear with haze; calm.  
 3. Fine and tolerably steady images.  
 6. Clear; well defined images; strong wind.  
 8. Between many clouds.  
 10. Quite clear; limbs a little undulating.  
 17. Clear with many clouds and strong W. wind.  
 19. Clear with many clouds; steady images.  
 22. Clear, between many clouds; fine.  
 27. Clear; images rather steady.  
 30. Clear, between many clouds.  
 Apr. 2. Steady, but very hazy.  
 3. Very clear and fine, though some undulations.  
 4. Clear, steady.  
 5. Clear, the wind sometimes moving the telescope.  
 8. Clear.  
 9. Clear and fine.  
 10. Hazy.  
 11. Clear with some clouds; steady images.  
 13. Clear between clouds; strong W. wind.  
 14. Hazy, somewhat undulating.  
 15. Clear and fine.  
 17. Clear and fine.  
 20. Clear and steady, with many clouds.  
 23. Beautifully clear; a little wind.  
 27. Clear; undulating limbs, with strong W. wind.  
 May 4. Clear; strong W. wind.  
 15. Clear.  
 17. Clear; undulating limbs.  
 19. Clear, a little hazy; sharply defined images.  
 20. Clear and fine.  
 24. A little hazy; steady images.  
 30. Clear with clouds.  
 June 1. Clear.

June 5. Clear.  
 8. Clear, between clouds.  
 10. Clear and fine.  
 12. Between many clouds.  
 16. Very clear between cumuli.  
 18. A little undulating, with S. wind.  
 20. Clear, with hazy clouds; steady images.  
 23. Clear, images sometimes a little blurred.  
 25. Much undulating, strong W. wind.  
 28. Hazy clouds.  
 30. Clear; limbs a little undulating.  
 July 3. A little haze; neat and well defined images.  
 5. Steady; somewhat hazy.  
 9. Hazy, though pretty distinct images.  
 12. Clear.  
 15. Clear.  
 17. Clear between clouds.  
 19. Fine and clear.  
 Aug. 5. Many clouds.  
 10. Many clouds.  
 16. Very clear and sharply defined images.  
 17. Clear and fine, though windy.  
 20. Clear.  
 22. Clear with many clouds; well defined images.  
 24. Clear.  
 27. Clear between clouds.  
 28. Between many clouds.  
 30. Clear with some clouds.  
 Sept. 1. Clear.  
 2. Clear with many clouds; pretty steady images.  
 4. Clear and steady; fine.  
 22. Clear between clouds; limbs undulating.  
 24. Clear and fine.  
 27. Clear.  
 29. Very hazy; wind S.  
 30. Somewhat hazy, though steady and sharp images.  
 Oct. 1. Clear; spots swimming.  
 3. Much blurring.  
 5. Clear; little blurring  
 6. Clear and fine.  
 7. Clear.  
 13. Clear, undulating.  
 14. Clear, with clouds; limbs somewhat undulating.  
 15. Clear and fine.  
 16. Clear and fine.  
 18. Clear, some blurring.  
 19. Clear, strong S. W. wind sometimes putting telescope into oscillations.  
 20. Clear through thin haze; very distinct and steady images.  
 21. Clear; S. W. wind.  
 22. Clear; strong gale S. E. shaking the telescope.  
 23. Clear.  
 27. Sometimes clear, mostly thick, between many clouds.  
 28. Clear, hazy toward the end.  
 Nov. 1. Clear and fine; S. W. wind.  
 25. Clear sky; blurring images.  
 26. Very hazy.  
 1867 Jan. 2. Hazy; images very sharply defined.  
 Mar. 8. Clear.  
 14. Clear between clouds; strong W. wind.  
 19. Fine, clear.  
 20. Clear; blurring images.  
 22. Hazy; images well defined.  
 24. Clear and pretty well defined images.  
 26. Clear.  
 30. Hazy.  
 Apr. 3. Clear; fine.

- 1867 Apr. 9. Clear.  
19. Clear; blurring images.  
May 23. Clear between heavy clouds.  
24. Very clear between clouds.  
25. Well defined images; strong S. wind.  
27. Clear between many clouds.  
29. Clear and steady, with many clouds.  
31. Clear; telescope unsteady from strong W. wind.  
June 3. Clear between many clouds.  
4. Clear between many clouds.  
July 1. Clear.  
3. Smoky.  
4. Clear.  
6. Clear with clouds.  
13. Clear; limbs undulating.  
15. Clear and fine.  
16. Clear with clouds.  
Aug. 18. Clear and fine; some clouds.  
19. Clear with many clouds.  
Sept. 7. Clear and fine.  
8. Clear; limbs undulating.  
9. Clear; fine.  
11. Beautifully clear; images at times blurring.  
12. Fine and clear.  
13. Through thin haze between clouds; good and steady images.  
14. Fine and clear; images sometimes blurring.  
15. Bright and fine.  
17. Clear between many clouds.  
18. Clear and fine; then haze.  
19. Clear.  
20. Very fine and clear.  
21. Haze and thin clouds.  
Oct. 2. Through thin clouds, fine; then overcast.  
3. Thin and fine; through a large gap, then clouds.  
4. Clear and fine.  
7. Entirely clear; images a little blurring.  
8. Clear and fine.  
13. Clear through gaps between clouds.  
14. Undulating, between clouds; strong W. wind.  
16. Clear, though much blurring.  
17. Clear; the S. wind shaking the telescope.  
18. Clear, much wind, images trembling.  
Nov. 5. Clear with many clouds and strong wind.  
6. Badly swimming and undulating.  
7. Very hazy; blurring images.  
8. Extremely blurring; E. wind; the sky was quite clear.  
11. Hazy.  
12. Very hazy.  
13. Clear; much blurring and strong W. wind.  
Dec. 1. Clear; blurring.  
3. Pretty clear.  
4. Beautiful day, but sky with thin clouds; spots and limbs swimming.  
7. Haze or thin clouds between thicker ones.  
10. Between many clouds; observations often interrupted.  
26. Quite clear, but limbs much undulating.  
28. Through gaps between many clouds; images good.  
31. Clear; spots little swimming; S. wind.  
1868 Jan. 5. Entirely clear; images blurring.  
10. Quite clear; heavy W. wind.  
11. Clear; well defined images.  
30. Hazy and images rather dim.  
Feb. 1. Clear and beautiful.  
5. Clear; images blurring; strong S. wind shaking telescope.  
8. Clear cold S. wind.
- Feb. 10. Badly swimming images.  
11. Sky quite clear; badly swimming images.  
18. Blurring.  
22. Quite clear; not quite steady.  
23. Haze or thin clouds; images indistinct.  
Mar. 4. Between snow clouds; blustering winds from W.  
5. Clear and fine.  
8. Fine and steady images, through a thin veil of haze.  
11. Clear, little haze; sharply defined images.  
14. Some haze; steady images.  
15. Beautifully clear; images steady and well defined.  
16. Sky very thick and hazy; smaller spots invisible; S. W. wind.  
19. Clear, little swimming.  
22. Clear, strong wind.  
23. Clear and fine.  
24. Clear, spots a little dull.  
25. Clear but badly blurring.  
26. Clear and fine.  
27. Very clear; sometimes blurring and undulating limbs.  
28. Clear, sometimes a little blurring.  
29. Clear.  
30. Steady, a little hazy.  
31. Clear and fine.  
Apr. 1. Clear and fine.  
3. Clear; limbs a little undulating.  
6. Clear and sharp, though strong S. wind.  
8. Very thick sky; spots scarcely seen at the end of the observation.  
9. Clear and sharp; strong W. wind.  
11. Clear: spots sometimes swimming.  
12. Very hazy with some few clear moments between.  
14. Clear; limbs very much undulating; strong S. wind.  
15. Clear; spots sometimes blurring; strong S. wind; warm and moist.  
17. Clear and fine, though limbs sometimes a little undulating; W. wind.  
19. Haze very thick with some clear moments, then overcast; strong S. wind.  
22. Clear and fine; west wind pretty strong.  
24. Perfectly clear; limbs a little blurring.  
26. Clear and fine, but strong W. wind sometimes shaking the telescope.  
28. Clear.  
30. Between many clouds; showery; strong W. wind shaking telescope.  
May 1. Hazy.  
3. Clear, though images often blurring.  
4. Between many flying clouds.  
9. Clear and fine, with clouds.  
12. Clear between clouds.  
14. Between many clouds.  
17. A little hazy, though images sharp.  
20. Fine images; hazy clouds.  
26. Clear.  
28. Clear and fine, with clouds.  
29. Clear.  
30. Clear; some hazy clouds.  
June 2. Clear.  
3. Clear.  
4. Through hazy clouds.  
6. Through hazy sky, with many clouds; strong S. wind.  
8. Clear.  
10. Clear; some haze.  
12. Clear.  
13. Hazy, though spots well defined and steady.  
15. Hazy.

1868 June 17. Clear and fine.  
 19. Clear with clouds; steady images.  
 20. Clear.  
 23. A little smoky, after a heavy rain on the day preceding.  
 25. Clear, but blurring images; E. wind.  
 26. Sky hazy; though steady and well defined images.  
 27. Clear.  
 28. Smoky and images sometimes blurring, still pretty distinct.  
 30. Clear.  
 July 1. Blurring.  
 2. Much blurring.  
 3. Clear.  
 4. Clear.  
 5. Clear and fine.  
 12. Clear.  
 17. Clear.  
 18. Clear; sometimes blurring images.  
 19. At first many clouds, then pretty steady.  
 20. Clear.  
 26. Smoky, though well defined images.  
 28. Very thick, smoky.  
 31. Many clouds.  
 Aug. 2. Clear.  
 9. Clear and good images.  
 11. Many clouds.  
 12. Fine and clear, between clouds.  
 13. Fine and clear, strong W. wind.  
 14. Clear, little undulating.  
 16. Clear, between clouds, very fine.  
 17. Clear; spots sometimes badly blurring; wind E.  
 18. Fine and clear; strong S. wind.  
 19. Many clouds.  
 21. Fine, clear, with clouds.  
 22. Blurring.  
 23. Very fine, at times blurring.  
 25. Fine, clear; limbs sometimes a little undulating.  
 26. Clear.  
 28. Limbs undulating, wind S.  
 31. Clear, with some passing clouds.  
 Sept. 2. Very clear; limbs sometimes in undulation.  
 5. Strong W. wind and many clouds which sometimes produce a strong blurring.  
 6. Haze rather thick, though clear when sketch was made.  
 8. Fine, clear; spots frequently blurring.  
 10. Haze very thick (so that the declination of fainter spots could not be read).  
 12. Clear, between many flying clouds over the sun; sometimes blurring; wind E.  
 14. Very hazy.  
 15. Very distinct, though limbs tremulous with S. E. wind.  
 16. Very clear, between many clouds; gale blowing from the W.  
 17. Clear with clouds.  
 21. Blurring.  
 26. Clear with thin hazy clouds sometimes; limbs blurring  
 28. Very clear, with interruptions of clouds; wind strong W.  
 29. Clear with many clouds; strong W. wind.  
 Oct. 1. Well defined and steady, though hazy clouds.  
 3. Quite clear, somewhat blurring.  
 5. Fine, clear, with some clouds.  
 9. Clear, badly undulating limbs.  
 11. Clear and well defined; strong S. W. wind.  
 16. Clear and pretty steady.  
 17. Clear (during night first slight fall of snow of the season).  
 27. Extremely blurring and undulating; gale of S. wind.  
 29. Clear though blurring.

Nov. 3. Clear, somewhat blurring.  
 Dec. 19. Blurring; sky quite clear. After a long period of constantly dark weather, it had cleared up toward morning finally.  
 24. Dancing with light clouds.  
 1869 Jan. 7. Clear; little blurring.  
 10. Clear; well defined limbs and spots.  
 14. Clear, a little hazy; S. wind.  
 16. Clear, steady.  
 27. Clear, with a little haze.  
 29. Fine and clear, little blurring.  
 Feb. 1. Clear.  
 2. Very thick haze.  
 7. Very much blurring.  
 13. Blurring; sometimes steady.  
 25. Clear and sharply defined; strong W. wind.  
 28. Clear.  
 Mar. 1. Clear, some blurring.  
 3. Fine.  
 9. Clear.  
 12. Clear between clouds and snow storm.  
 16. Very clear, through many clouds.  
 17. Clear, little blurring, some haze; halo around the sun.  
 18. Fine, clear, with clouds.  
 21. Clear and fine, though strong W. wind.  
 22. Clear, sometimes haze; strong E. S. E. wind, shaking the telescope.  
 25. Rather clear.  
 28. Clear and fine.  
 Apr. 1. Very hazy.  
 10. Clear, with some clouds and W. wind.  
 13. Many clouds, clear between.  
 15. Clear and fine.  
 18. Clear, with some light clouds; spots very fine and distinct.  
 23. Fine, clear; wind E.  
 25. Clear, but wind very strong.  
 29. Hazy, clear between.  
 May 6. Fine, clear, sometimes blurring.  
 8. Clear; strong wind.  
 10. Clear and fine.  
 12. Clear, sometimes blurring; then with clouds.  
 14. Clear, blurring in the latter sets.  
 20. Clear; strong wind.  
 22. Many clouds.  
 23. Hazy, though very well defined.  
 24. Hazy, beautifully distinct.  
 27. Somewhat hazy.  
 31. Very clear, with many clouds.  
 June 1. Clear, with hazy clouds.  
 9. Clear, sometimes a little blurring.  
 12. Many clouds; very clear between.  
 14. Very clear, between many clouds; blurring.  
 16. Fine, clear, little tremulous, after heavy rain showers.  
 July 17. Clear and distinct.  
 18. Clear, little hazy, well defined.  
 20. Very many clouds; S. wind.  
 22. Very clear and neat, with clouds and W. wind.  
 25. Clear and neat; S. wind; a little hazy.  
 Aug. 18. Hazy with clouds; clear sometimes between the haze.  
 19. Some haze.  
 22. Clear.  
 23. Clear.  
 24. Very clear, between many clouds.  
 26. Clear and pretty steady, sometimes blurring.  
 28. Clear.  
 Sept. 11. Fine and clear.

1869 Sept. 13. Clear and fine.  
 17. Very many clouds.  
 19. Clear and very fine.  
 20. Fine and clear.  
 23. Clear after two days of rain; some thin clouds flying.  
 24. Clear and distinct.  
 28. Many clouds, otherwise pretty steady and clear.  
 30. Clear, sometimes blurring.  
 Oct. 2. Clear; sometimes blurring, with strong S. wind.  
 6. Beautifully clear; limbs a little undulating.  
 8. Fine and clear.  
 11. Many clouds, though clear between.  
 16. Between very many clouds; very clear.  
 21. Very clear, though undulating.  
 25. Clear, though strong W. wind.  
 Nov. 2. Clear, with some blurring of limbs.  
 3. Little hazy.  
 4. Very clear and fine.  
 13. Rather hazy, and often badly blurring and indistinct.  
 14. Haze very thick; wind E.  
 19. Very hazy.  
 22. Clear, but very much blurring, spots sometimes dancing.  
 24. Blurring.  
 Dec. 3. Clear between thick snow clouds.  
 9. Fine and clear; wind S.  
 27. Fine, though hazy.

1870 Jan. 19. Sky thick, only sometimes clear between; calm.  
 22. Hazy, blurring; spots dim; S. wind.  
 26. Fine.  
 28. Clear, but very much blurring; wind S. W.  
 31. Hazy.  
 Feb. 7. Very clear, with clouds; sometimes blurring.  
 10. Very fine and clear, then suddenly clouding up thickly.  
 23. Clear and fine images; cold weather.  
 26. Clear and fine.  
 Mar. 6. Hazy and thin clouds, sometimes indistinct; wind S. W.  
 9. Beautifully clear and distinct.  
 14. Well defined and through haze.  
 18. Fine, clear, but blurring or rather undulating.  
 24. Fine, clear; strong W. wind.  
 Apr. 3. Very clear; wind; limbs a little undulating.  
 9. Fine, clear.  
 13. Beautiful, clear, and finely distinct.  
 23. Clear.  
 26. Fine and clear.  
 30. Fine, though somewhat hazy.  
 May 5. Clear and fine.  
 13. Very fine.  
 19. Clear with clouds.  
 27. Clear and fine; strong E. wind.  
 30. Clear and distinct.

## SUMMARY BY DATES OF NUMBER OF SPOTS OBSERVED

This summary was extracted from the fourteen observing books of Dr. Peters, each of which contained such a list of the numbers of spots observed. A résumé up to August 17, 1863, was published in his article in *Astronomische Nachrichten*, 64, 213-218, 1865, with the following words of description (translated):

“The following table contains for each observing day the number of spots of which the co-ordinates were determined as stated. To these are also added the days on which variable weather permitted the spots to be sketched

only and not to be measured. For these, the numbers signify merely countings from the sketches, and they are therefore enclosed in parentheses. The observations were interrupted in August, 1863, by a long trip to Europe, and were not begun again until the beginning of November of last year. The résumé may, therefore, embrace for now only the first series. Inasmuch as some time will be required for the complete publication I shall be ready, upon request, to communicate the details for separate days by letter."

Dr. Peters' notes include, beside the statement of the weather conditions, references to Wilson's theory of the depression of sun-spots. A total of 172 spots are mentioned in this connection, of which 141 favor Wilson's theory, and 31 are opposed to it. To make these observations available for any possible discussion on this point, the dates are here given, with the letter identifying the spot.

## SPOTS FAVORING WILSON'S THEORY

1860 June 15, <i>h</i> and <i>h'</i> June 16, <i>i</i> 20, <i>h</i> and <i>k</i> July 4, <i>a</i> and <i>b</i> 6, <i>a</i> 8, <i>b</i> 15, <i>f</i> 20, <i>h</i> 22, <i>m</i> 24, <i>o</i> July 30, <i>a</i> and <i>e</i> Aug. 16, <i>g</i> 20, <i>a</i> Sept. 15, <i>f</i> 30, <i>b</i> and <i>h</i> Oct. 15, <i>e</i> Nov. 25, <i>b</i> 1861 Feb. 25, <i>i</i> April 25, <i>m</i> and <i>n</i> 27, <i>q</i> May 5, <i>g</i> 7, <i>d</i> June 7, <i>a</i> 13, <i>g</i> 22, <i>d</i> 29, <i>d, d'</i> July 5, <i>b</i> 7, <i>a</i> 11, <i>h</i> 27, <i>e</i> Aug. 1, <i>c</i> Sept. 29, <i>c</i>	Oct. 1, <i>a</i> Nov. 1, <i>b</i> 20, <i>d</i> Dec. 5, <i>h</i> 13, <i>h</i> 15, <i>a</i> 1862 Jan. 24, <i>a</i> Feb. 7, <i>a</i> 8, <i>a</i> 11, <i>f</i> Mar. 19, <i>b</i> April 25, <i>a</i> May 8, <i>e</i> 11, <i>f</i> 15, <i>h</i> 28, <i>f</i> June 5, <i>b</i> 22, <i>k</i> <sup>3</sup> 26, <i>a</i> July 11, <i>e</i> 19, <i>a</i> 27, <i>a</i> Aug. 8, <i>a</i> 22, <i>a</i> and <i>b</i> 24, <i>f</i> Sept. 17, <i>a</i> 25, <i>b</i> Dec. 12, <i>e</i> 1863 Jan. 18, <i>d</i> 31, <i>a</i> Feb. 18, <i>e</i> and <i>g</i> April 3, <i>a</i>	April 13, <i>d</i> and <i>d</i> <sup>5</sup> 23, <i>g</i> 24, <i>a</i> May 5, <i>a'</i> 9, <i>g</i> July 5, <i>f'</i> Aug. 7, <i>a</i> 1864 Dec. 9, <i>a</i> 1865 Feb. 12, <i>c</i> <sup>4</sup> 24, <i>a</i> May 15, <i>a</i> 26, <i>a</i> and <i>b</i> 1866 Jan. 3, <i>c</i> Mar. 3, <i>b</i> May 20, <i>b</i> June 28, <i>c</i> Sept. 30, <i>a</i> Oct. 1, <i>a</i> 28, <i>a</i> 1867 July 4, <i>a</i> Oct. 18, <i>a</i> Dec. 1, <i>d</i> 1868 Mar. 5, <i>a</i> April 8, <i>a</i> 22, <i>b</i> June 8, <i>c</i> July 2, <i>a</i> 3, <i>a</i> 28, <i>a</i> Aug. 26, <i>a</i> Sept 15, <i>a</i> 29, <i>f</i>	Oct. 1, <i>d</i> 29, <i>a</i> 1869 Mar. 1, <i>a</i> 17, <i>e</i> April 18, <i>e</i> 25, <i>d</i> May 10, <i>i</i> 20, <i>d</i> 24, <i>d</i> 31, <i>b</i> June 1, <i>a</i> 12, <i>b</i> July 18, <i>h</i> Aug. 24, <i>a</i> Sept. 13, <i>b</i> 20, <i>c</i> Oct. 6, <i>c</i> 16, <i>a</i> 21, <i>f</i> Nov. 13, <i>h</i> Dec. 9, <i>b</i> and <i>c</i> 1870 Jan. 28, <i>b</i> Mar. 14, <i>a</i> April 3, <i>d</i> 9, <i>a</i> 13, <i>b</i> 23, <i>a</i> 30, <i>a, b, c, e</i> May 13, <i>m</i> and <i>o</i> <hr/> Total 141

## SPOTS OPPOSING WILSON'S THEORY

1860 Aug. 6, <i>c</i> and <i>n</i> Oct. 31, <i>f</i> <sup>3</sup> 1861 Jan. 5, <i>f</i> April 5, <i>b</i> 27, <i>a</i> June 29, <i>f</i> Nov. 1, <i>f</i> Dec. 2, <i>g</i>	Dec. 12, <i>g</i> 1862 Jan. 14, <i>g</i> April 12, <i>a</i> 13, <i>a</i> 25, <i>f</i> June 8, <i>b</i> 20, <i>g</i> July 10, <i>d</i>	July 31, <i>f</i> Aug. 18, <i>e</i> Sept. 15, <i>d</i> and <i>e</i> 25, <i>g</i> Oct. 28, <i>i</i> 1863 Feb. 21, <i>b</i> Mar. 13, <i>a</i> May 8, <i>a</i>	1865 Mar. 11, <i>a</i> 1868 May 3, <i>b</i> 1869 June 1, <i>g</i> Sept. 24, <i>d</i> 1870 May 30, <i>b</i> <hr/> Total 31
---	--	--	--

Aside from the references to Wilson's theory, the notes contain one other item which perhaps ought to be recorded, viz., July 5, 1868: Spot *a*. "A notch on the sun's limb formed by the elevation of photospheric matter. The sun's limb very sharply defined."

LIST OF THE PRINCIPAL PAPERS BY DR. C. H. F. PETERS DEALING WITH SOLAR OBSERVATIONS

"Contributions to the Atmospherology of the Sun," *Proceedings of the American Association for the Advancement of Science*, Vol. IX, pp. 85-97, 1855.

A summary of this paper is given in a letter to Humboldt, published in *Poggendorffs Annalen*, 96.

"A Method for Deriving the Geocentric Right Ascension and Declination of a Solar Spot from Its Heliographic Co-ordinates," Brünnow's *Astronomical Notices*, No. 6, 1859.

"Uebersicht der auf der Sternwarte des Hamilton College angestellten Sonnenbeobachtungen," *Astronomische Nachrichten*, 64, 209-20, 1865.

"Zur Refraction auf der Sonne," *ibid.*, 71, 241-52, 1868.

"Some Critical Remarks on So-called Intra-mercurial Planet Observations," *ibid.*, 94, 321-36, 337-40, 1879.
